

B&K Precision and WEEE / RoHS

B&K Precision is committed to reducing or eliminating hazardous materials, including lead, from its test instruments products.

We are working to reduce the substances established by the European Union's directives:

- Directive 2002/95/EC of the European Parliament and of the Council of 27 January 2003 on the *Restriction of the use Of certain Hazardous Substances in electrical and electronic equipment* (RoHS).
- Directive 2002/96/EC of the European Parliament and of the Council of 27 January 2003 on *Waste from Electrical and Electronic Equipment* (WEEE).

Our overriding concern is that the effort does not adversely impact consumer safety when using our instruments. This would outweigh the environmental benefits of the action. Otherwise, we are focused to finding the most appropriate and cost-effective methods to reduce the hazardous substances in our products.

To this end, while continuing our efforts to reduce or eliminate all noted hazardous materials, B&K Precision test and measurement instruments are fully compliant with RoHS by virtue of classification under Category 9, monitoring and control instruments, which is currently exempt from restrictions.

B&K Precision will be fully compliant with the WEEE directive in accordance with each member state's legislation.
